

Product: **DINITROL 447**
PROTECT SUPER
Underseal with anti-rust zinc

Properties: **Dinitrol 447** is a rubber-synthetic resin based, quick drying underseal. Addition of zinc improves rust protection and prevents or delays rusting in places where the coating has been damaged.
Dinitrol 447 does not contain aggressive solvents such as chlorinated hydrocarbons (CFC/CC's), esters, ketones or aromatics and is ideal for treatment of car body works.
Dinitrol 447 will not attack PVC, does not contain asbestos or bitumen, stays permanently elastic and protects against stone and salt damage. When fully dried it can be finished with any of the commonly available lacquers.

Instructions: Surfaces must be dry, oil grease and dust free. Using an earthed spray gun and an air pressure of 4 – 6 bar, spray evenly from side to side. Once dry, the surface can be lacquered. Spots can be removed with a cloth soaked in benzine.
